

WEB AND MOBILE APPLICATIONS //

GIS

GIS programs are only as successful as the method used to maintain them—and we believe every client should have a reliable, easy-to-use GIS. This is why we offer SAM Integrity™, powered by Geocortex®, our web-based software application to access, edit, maintain, and analyze your GIS data.

Built on Esri® technology, this intuitive program has built-in workflows to support daily operations and asset management. SAM Integrity™ is easy to use and allows users in all departments, at all levels of GIS understanding, to access their GIS data from any computer or mobile device, anytime, anywhere.

The implementation of SAM's web-based and mobile solutions for GIS and asset management enable field staff to take their GIS data to the jobsite and make data-driven decisions and changes in the field.

Our technology is the difference

In an industry facing so many challenges, from mounting regulations to managing aging infrastructure, SAM is both equipped and committed to building your GIS data into a comprehensive system—allowing for seamless operational tracking and asset management. In addition to our own in-house tools, we have successfully integrated GIS data with countless third party software tools and data programs, as well as analysis data sets.

SAM has in-place system architecture to host and protect our client's data. With dedicated in house infrastructure and redundancy at every location, we can secure and store your GIS data while making it securely accessible via our web services. This minimizes vulnerability to data loss and security issues, preventing local disasters and emergency events from interfering with the protection of your valuable assets.

Key Services:

- Application Design and Implementation
- On-Going Technical Support
- Security and Hosting Services
- Mobile Application Development
- Custom Programming and Workflow Design

What differentiates SAM?

SAM has built a reputation as a trusted, knowledgeable, and innovative partner. SAM transforms petabytes of complex spatial data into intelligent insights in a holistic Managed Geospatial Services™ (MGS™) framework. As North America's premiere MGS™ company, SAM provides practical, precise, and high-fidelity solutions designed to enhance decision-making, mitigate risks, achieve strategic objectives, and drive costs out of our client's business. Our vision is to advance spatial data acquisition, improve analysis capabilities, and develop predictive analytics to redefine and transform how infrastructure assets are developed and managed throughout their lifecycles.
