

ROAD MONITORING //

RENEWABLES

EFFECTIVE DOCUMENTATION TO PROTECT YOUR PROGRAM

With over 30 offices across the country, we have the national footprint to fulfill programs no matter how remote, and the local knowledge to work with municipalities and meet their exacting specifications. Our experienced teams can help you to mitigate risk by documenting road conditions before, during, and after the building phase of your program. As a solutions-oriented firm with a robust workforce, we can tackle large programs and adapt to any unique challenges that your goals require.

sam.biz

SAM has built a strong reputation for professionalism and quality work in the renewables industry, and our partnerships with clients have contributed to 34 wind, 195 solar, and 51 battery storage programs in 2021 alone. With decades of experience and deep industry knowledge, we have a long history of bringing renewable energy to the grid and helping clients meet their Environmental, Social, and Governance (ESG) goals.

KEY SERVICES

- 360° High Resolution Imagery
- Ultra High Resolution Imagery via Orbit Cloud Solution
- High Definition Video
- Current Condition Documentation
- LIDAR Surface Modeling and Horizontal and Vertical Clearances
- Change Detection

Enhanced Capabilities //

As the nation's leading Managed Geospatial Services™ firm, we offer a higher level of inspection and documentation than a small operation can deliver. Our enhanced capabilities allow us to inspect and document all routes needed for special equipment, including access roads and hard-to-reach locations.

SAM provides a wide array of documentation up to continuous, high-res 360-degree program site documentation, which results in a cloud-accessible 3D video that the program team can view on-demand.

Advanced Equipment and Proprietary Technology //

SAM invests in the newest technology, including multiple Optech Lynx and RIEGL mobile mapping systems ready for deployment nationwide.

Top-of-the-line mobile mapping coupled with our cloud-enabled, proprietary mobile applications allow for better communication and data storage and near-real time delivery of data.
