## Supporting federal contracts nationwide with Managed Geospatial Services™

SAM's Managed Geospatial Services™ framework lays a foundation for fast, reliable planning, design and execution for federal programs of all types and sizes.

For decades, our MGS™ platform has supported architectural and engineering partners in developing cost-efficient and regulatory compliant solutions for federal infrastructure and building management. Our advanced technology solutions and experienced professionals deliver exceptionally complete data that clients need to keep public programs on-budget and on-schedule.

### **A single point of contact for a complete range of geospatial services**

SAM provides turnkey solutions through the combined support of our geospatial solutions teams. Our diverse offerings enhance one another, bringing fresh perspectives to potential challenges at every stage of your program. We offer a complete range of services such as geomatics, mapping, and utility engineering to support the building of utilities, drainage improvements, and facilities including barracks and airfields, as well as boundary stakeouts for military bases, parkland, and national forests.

### **Our technology is a game-changer**

We adopt the industry's best technologies and work closely with their developers to add the features that help us collect more accurate data and communicate results faster. We combine industry-leading mobile, airborne, and terrestrial LiDAR, photogrammetry, subsurface utility searching and designating equipment and GPS-based sensors to secure the most complete picture. We also make sure that data works for you by breaking down large datasets into usable pieces that work in your preferred format.

### **Trusted experience in delivering data for Federal infrastructure**

SAM holds decades of experience supporting contracts for the U.S. Army Corps of Engineers, The U.S. Air Force, Department of Veterans Affairs, Department of Agriculture, and the Department of Interior and numerous federal agencies and bureaus. Our programs have resulted in "exceptional" performance evaluations due largely to our responsiveness and ability to tailor solutions to meet client needs.

We attribute that fast, on-target response to a tremendous coast-to-coast network of experienced geomatics experts, mapping specialists and utility engineers working with leading-edge technology. Our team holds the necessary certifications and licenses to rapidly move programs forward. As a former small business and DBE firm, SAM is committed to teaming with small businesses and supporting these partners in navigating federal contracts. As evidence of this commitment, SAM is participating in the Small Business Administration's Mentor-Protégé program.
