

OIL & GAS //

Comprehensive Geospatial and Inspection Services for the Oil and Gas Industry

SAM's Oil and Gas Solutions provide infrastructure owners with specialized geospatial and inspection services that deliver accurate, actionable data. This enables teams to make smarter, proactive decisions across exploration, construction, maintenance, and regulatory compliance, helping reduce inefficiencies and avoid costly delays caused by reactive project execution.

SAM supports pipeline and facility programs with advanced aerial and terrestrial LiDAR, subsurface utility detection, and GPS-based technologies to improve asset performance, speed permitting, and enhance operational efficiency. Unlike firms focused on a single service area, SAM offers a holistic, scalable approach—from new pipeline design surveys and as-builts to integrity and compliance support—delivered nationwide in formats that integrate seamlessly with existing workflows.

sam.biz

Scalable services—from exploration through distribution

Our regional offices may have the feel of a local firm, but SAM provides the security of working with a firm that has thousands of miles of proven experience. We offer a complete range of energy infrastructure services, from new pipeline surveying and easement acquisition support to maintenance and integrity support and legacy mapping.

By capturing the most accurate data upfront, SAM speeds the permitting process for federal, state, and local regulatory agencies and helps clients achieve their goals faster.

Our technology is a game-changer

We adopt the industry's best technologies and work closely with their developers to add the features that help us collect more accurate data and communicate results faster. We combine industry-leading airborne and terrestrial LiDAR, subsurface utility searching and designating equipment, and GPS-based sensors to secure the most complete picture possible.

We quality check the data and deliver it promptly in your preferred format, including BlueSky AlignDB, AutoCAD, MicroStation, and ArcGIS. SAM can also work with your in-house database management systems, such as PODS or APDM, to format legacy job-book data into a digital solution.

Our nationwide network of experienced surveyors, mapping specialists, and utility engineers holds the necessary certifications and licenses to rapidly move projects forward. We are Op-Qual certified for AOC, H2S and OSHA 10, and DOT compliant.

SAM Core Services

Land Surveying / Aerial Mapping / GIS / 3-D Laser Scanning
BIM / SUE / Utility Coordination / CEI
